

EdgeTech

## EdgeTech Registration Form - Project Pipeline

### 1. Requirement Gathering

- Identified the need for a clean, modern user registration form from the shared document.
- Determined required fields: name, email, phone, emirate, and consent checkbox.

### 2. Wireframing & Layout Planning

- Created low-fidelity sketches (paper and digital).
- Sketched a simple centered form layout to ensure focus and clarity.
- Chose a card-style container with generous white space for readability.

### 3. Visual Design Decisions

- Decided the brand name and create a logo.
- Applied a soft, blurred background to create depth and draw attention to the form.
- Selected a purple(#703AB3) as a primary color for buttons and branding to maintain a clean, tech-oriented theme.

### 4. Component Structuring

- Split the form into labelled input fields with placeholders for usability along with focus and error states.
- Added a dropdown for proper user input guidance.
- Create a component for checkbox with 2 states.

### 5. UX Enhancements

- Used rounded inputs and a single, prominent “Submit” button for smooth interaction.
- Included links to Terms of Use and Privacy Policy for compliance.

### 6. Final Review & Optimization

- Verified spacing, alignment, and readability across the form.
- Ensured the design remains minimal.
